PROTECT YOURSELF AND YOUR EMPLOYEES!

The spitting protection of MiniTec offers an effective barrier against droplet infections

A useful pass-through for documents, change, etc.

Version without corner component with stable feet.

Effective spitting protection as counter top

The protection of your employees against corona infection has top priority - whether at the point of sale, in the doctor's surgery or in the open-plan office. With a spit protection from MiniTec we offer you a fast and effective solution. The protective wall is simply placed between the conversation partners and thus considerably reduces the direct transmission path. This can be done directly via the mucous membranes of the respiratory tract (sneezing, coughing, saliva) or via the hands with which you later touch your face, thus bringing the pathogen into contact with the mucous membranes.

Highly hygienic

Thanks to its smooth surface, aluminium is very easy to clean and disinfect and is much more hygienic than other materials such as wood.

Quickly mounted

Our aluminium profiles and the plexiglass panes can be joined together with only a few tools to form an effective protective wall against droplet infections and set up at the desired location.

Flexible dimensions

The standard protection is around 100 cm high and 150 cm wide and can be extended by a 50 cm wide corner component. In the lower sector there is a 20 cm high recess as a pass-through for change etc. But other dimensions and designs can also be realized without any problems - just let us know your wishes!

Hygiene station for disinfection

Leave nothing to chance when it comes to hygiene and place the MiniTec hygiene station in your entrance area. This way your visitors disinfect their hands right at the beginning - and your employees are protected! The station has a practical collection tray and is 125 cm high. It is made of the proven MiniTec aluminium profile system. This means maximum flexibility, because thanks to the continuous groove you can attach your dispenser at any desired height. The station is suitable for most commercially available dispensers.
